Osprey-VLE is a white-label platform from Coracle that makes integrating learning and development into daily lives easy.

Whatever your device, language or internet connectivity, our vision is for a world where no-one is isolated from learning opportunities.

Operational management tools cover compliance, reporting and data analytics, removing time consuming manual processes. As an open and social platform, APIs can connect your users to a range of other platforms, including CRMs such as Salesforce.com

The currency of learning (as a sub-heading) . Osprey-VLE offer flexible accreditation, built from structured (formal) and unstructured (informal) activities, because research shows that we like tangible outcomes.

> "
> Coracle is like my own knowledge database. I sometimes get lazy, but just knowing that the app is on my phone is comforting enough."

BRIDGE KNOWLEDGE GAPS

Imagine how a business focussed, tailored learning platform would help your organisation.

CONTENT

Structured and unstructured blended learning, gamification, text and video (see Coracle-Consort).

TESTING

Online accreditation, badges and certificates (see Coracle-Exam).

ANALYTICS

Data to check what really works, presented in formats that give a quick overview and full details.

OUTCOMES FOR MANAGERS AND LEARNERS

- Live dashboards and reports
- CRM and API integrations
- Technical support
- Individual Learning Plans
- Skills Gap Analysis
- Apps for anywhere, online/offline

FEATURES

THE LEARNING LINE

At the core of an open approach to learning is the need to de-couple content from platform. The concept of de-coupling and of micro-learning builds on studies that promote bite-sized learning, combined with frequent testing.

Coracle's Learning Record Store (LRS) can receive data from anywhere on the internet, meaning that activities may be hosted anywhere and allows us to integrate legacy content.
The Learning Line is a record of user generated statements in the format 'I DID THIS'. Statements may be automatically generated based on user actions, or manually created and authenticated.

Users have the option to record private comments associated with any statement. Statements and comments may be shared with mentors or group members.

INDIVIDUAL LEARNING PLANS (ILP) & THE SKILLS RADAR

Evidence shows that generating ILPs based on a mix of attitude and aptitude assessment leads to higher levels of user engagement, and better results.

The skills radar sits at the heart of our approach to generating skills gap analysis and is based on selfassessment attitude and aptitude tests.

ANALYTICS

Osprey-VLE comes with a range of real-time reports, stats and dashboards for users and course administrators.

Real time reports are available to download to .pdf / .jpg / .csv to help with analysis of the effectiveness of the programme.

OFFLINE LEARNING

Providing apps allows us to offer offline learning with user generated data being stored locally whilst a user is offline.

Data retrieval is accomplished using our "Asynchronous Background Sync (ABS)" model when connection is next made to the internet.

This approach ensures all statements are associated with an event and this allows our predictive methodology to algorithmically anticipate future data receipts.

TECHNOLOGIES & STANDARDS

Coracle's applications are created from a number of layers, using a range of technologies, frameworks and standards.

Coracle aim for 100% accessibility to W3C standards. Osprey-VLE has been designed with any device compatibility. Activities may be delivered via PC, Mac, smartphone or tablet with no need for any plugins or add-ons.

Hosting and back-ups are on secure dedicated servers.
